Unit 11

Unit 11 emphasized professional growth through the establishment of an e-Portfolio, which were discussed as valuable tools for students and professionals across industries that can demonstrate skills and experiences. Engaging in reflections on learning experiences in previous units provided valuable insights into individual learning styles and their influence on professional practice.

The reflections formed the basis for filling out the professional skills matrix, which aided in the construction of an action plan for continuing professional development beyond the degree program. Trainees develop a comprehensive understanding of their learning achievements and goals through the creation of e-portfolios, which also provide benefits such as recognition, validation, assessment, reflection, recording, and planning of learning (Andriotis).
